

Landing Page Documentation

1. Overview

This project is a modern and responsive landing page built using HTML5, CSS3, and Bootstrap 5. The contact form is integrated with Formspree for email submissions.

2. Project Structure

- **index.html** – main HTML structure.
- **style.css** – custom styles.
- **images/** – contains illustrations and assets.

3. Page Sections

- **Navbar** – navigation bar at the top.
- **Hero Section** – main heading, text, and hero image.
- **Features Section** – highlights key features.
- **Contact Section** – includes contact form.
- **Footer** – copyright notice.

4. Customization

- Change logo text from tag in index.html.
- Modify colors in style.css file.
- Update Formspree action link to connect with your email.

5. How to Use

- Open index.html in any modern browser.
- Edit texts, colors, and images as needed.
- Upload files to hosting service (e.g., cPanel, GitHub Pages, Netlify).

6. Contact Form

The contact form uses Formspree to send messages directly to an email address. You can replace Formspree with your own backend if required.
